

SUMMARY OF MODIFICATIONS FOR CLOUDVTB

Summary of Modifications for CLOUDVTB Version 1.0.04

- SUPPORT FOR ZEDC** This allows you to use zEDC on historical tapes before zEDC was available and will reduce the elapsed time and number of bytes of a transfer by up to 70%.
- IMPROVED DISASTER RECOVERY** A process is documented to load the VSAM data and CLOUDVTB product libraries at a DR site, independently of CLOUDVTB, so that CLOUDVTB tapes can be easily recovered at that site
- COMPARE PROGRAM** Program CLDCOMPR is now included in the CLOUDVTB distribution. This program will allow you to validate that the contents of a downloaded data set match the original uploaded tape data set.
