

Innovation Data Processing and IntelliMagic have a special combined offering for you that can significantly improve the performance and ROI of your z/OS mainframe storage hardware.

[FREE](#) Assessment Offer from IntelliMagic Balance & Innovation FDRMOVE with FDRPAS!

Some of the benefits of this special offering include:

- *Easily and quickly decrease response times on performance stressed storage hardware by moving very active data to underutilized back-end hardware components*
- *Increase the overall throughput your current or new storage hardware can handle during your peak periods*
- *Minimize performance risks when consolidating smaller volumes to larger volumes*
- *Improve overall efficiency by easily understanding how different tiers of storage (different size & speed of disk types) would affect the performance for your specific workloads*
- *Make more informed purchasing decisions by identifying which data could benefit from Solid State Devices*

The key to these benefits is being able to easily and non-disruptively balance your workloads across the hardware resources you have already paid for or are planning to acquire. IntelliMagic and Innovation will make it surprisingly easy for you to realize significant savings on hardware spending while at the same time experiencing better I/O performance, with little to no risk.

Judge the impact of these benefits in your environment yourself. Request a [FREE](#) detailed assessment of your current storage efficiency and hardware reclamation potential now, and for the rest of 2011 receive a significant discount when you order our special combination package offering that includes both “IntelliMagic Balance” and INNOVATION “FDRMOVE with FDRPAS”.
