FATSCOPY

Take the right Steps.

- > Erasing Tapes
- > Mapping a Tape
- > Copying a Tape
- > Recovering Tapes with I/O Errors or Overwritten Tapes

"Migrated with FATSCOPY 9000 3490E tapes and 1000 9840 tapes to a Virtual Tape System (VTS). This was about 15TB's of data and was done as background jobs that were run over a 6 week period of time and did not cause any downtime."

"FATSCOPY allowed us to quickly consolidate 200 MAGSTAR tapes to 3 3592 tapes."

"We had a media problem on a 9840 tape that had 6000 HSM data sets. We used FATAR to copy the tape and HSM was then able to recall data sets successfully from the copied tape."

"To insure that no unencrypted data goes offsite we use FATSERASE to erase all existing data on our 3592 scratch tapes."

3480/3490 Tape EMC DLM IBM TS7700 SUN VSM Bus-Tech MDL

FATSCOPY, a z/OS tape copy, consolidation, migration and conversion utility can automate the process of copying and recataloging tape-based datasets from one tape media to another, including to, from and between all of the popular Virtual Tape, Vtape and VTS systems.
